

### The Essex Dizziness and Balance and Centre

The Essex Dizziness and Balance Centre has been open for one year and has successfully been treating patients with various vestibular disorders. Recently, we have been approached by an Ear, Nose and Throat (ENT) Surgeon who has expressed a wish to join our practice. It is our intention to expand the practice incorporating both audiology and ENT services to provide a wider range of available treatments for our clients.

The expansion would mean that we would be one of very few vestibular clinics in the UK that could provide all services under one roof. This would mean a huge reduction in waiting times for patients who suffer very distressing disorders.

Our plan is to put in an internal doorway between numbers 1 and 3 West Street and convert the existing rooms into a gymnasium and audiology department. This would allow us to do balance classes, Pilates and hearing tests. This will be nothing but of benefit to the ageing population of Rochford and would also bring business into the Square.
